

ENGINEER SUMMER INTERNSHIP OPPORTUNITY

Multiple summer internships are available for individuals interested in obtaining engineering experience with a progressive Arkansas based engineering firm whose primary focus is improving the communities that we live, work, and play in. We provide a positive and rewarding work culture and encourage our team members to maintain a healthy work/life balance. Opportunities are available at any of our four (4) office locations – Van Buren, Little Rock, Fayetteville, and Fort Smith. Successful candidates will exhibit a desire for engaging in a team environment on challenging projects to improve Arkansas's drinking water, lakes, streams, and roadways.

Responsibilities

- Provide technical design related to engineering projects including water and wastewater treatment plants, sanitary sewers, water lines, roadway construction, paving, storm sewers, parks, and trails
- Provide documentation of construction activities and quality control testing
- Process construction related documents
- Participate in a design team setting to produce quality engineering projects

Requirements

- Within three (3) semesters of obtaining a Bachelor or Master of Science in Civil, Environmental, Electrical, Chemical, Construction, Biomedical, or Biological Engineering
- Good communication skills, both written and oral
